Monthly investment commentary: March

March was a better month for UK equities, which out-performed the US and technology-dominated global equity market index. Better-than-expected inflation data for the UK contributed to falling bond yields and increased expectations of interest rate cuts. The FTSE All-Share was up 4.8%, with broad-based performance across large, mid and small caps. The investment universe – the DNSCI (XIC) – was up 4.2%, against which the Fund delivered a 3.8% return. The value style was a modest tailwind to relative performance.

Among the negative contributors to returns was **Wincanton**, which is subject to a takeover from the US-listed GXO and is currently the Fund's largest holding. Its shares drifted slightly after it became clear that the bidding war was over. Under our negotiated terms with the acquirer, Aberforth is bound to hold the shares until the shareholder vote to approve the deal. **Moneysupermarket.com**, the price comparison provider, issued no news in March, but the market was likely digesting February's results announcement and probing the sustainability of the recent strength of the group's large insurance comparison business. **Videndum**, the manufacturer and distributor of broadcast and photography equipment, fell following a delay to the announcement of its full year results.

The Fund's best performer was **Centamin**, the gold miner. The company reported good results in March, which coincided with the gold price reaching record highs. **Reach**, the publisher, saw its shares rise after it reported in-line results that revealed the first signs of stability in advertising yields. **CMC Markets**, the financial derivatives dealer, continued its strong recent share price performance. After undertaking investments in expanding its business lines, the company endured a challenging 2023. Three updates to the market in 2024 so far have brought with them more positive news on profitability.

Gearing

The Fund's Ord shares are geared by the capital entitlement of the ZDP shares which will rise continuously until the planned winding up date of 1 July 2024. The net gearing figure shown in the Key Fund information section is the percentage by which the total value of investments exceeds the total net assets.

Hurdle rates & redemption yields

The Fund's latest hurdle rates and redemption yields are available from the ZDP Analytics section of the AIC website at www.theaic.co.uk.

Data sources & calculations

All data supplied by Aberforth, except DnSCI (XIC) data (from Numis/Paul Marsh and Elroy Dimson – London Business School) and FTSE data (from FTSE International Limited).

Performance returns are total returns after all expenses and assume reinvestment of dividends. Yield is based on the Fund's trailing 12 months' dividends (excluding Specials). Active share is a measure of how the Fund's portfolio differs from the DnSCI (XIC). Small companies are represented by the DnSCI (XIC). Large companies are represented by the FTAS.

Risk warnings

Investments in shares of smaller companies are generally considered to carry a higher degree of risk as the market for their shares may be less liquid than that for shares of larger companies, making shares of smaller companies more difficult to buy and sell.

The performance of shares of smaller companies may be more volatile than the shares of larger companies over short time periods; therefore investors should regard such investments as long term.

There can be no guarantee that the investment objective of the Fund will be achieved or provide the dividends and returns sought by the Fund.

An investment in the Fund is only suitable for investors who are capable of evaluating the merits and risks of such an investment and who have sufficient resources to be able to bear any losses which may arise from such an investment (which may be equal to the whole amount invested). Such an investment should be regarded as long term in nature and complementary to existing investments in a range of other financial assets and should not form a major part of an investment portfolio.

An investment trust is a public limited company, the shares of which are traded on the Main Market of the London Stock Exchange. Accordingly, the ability of shareholders to sell their shares will be dependent on the market price of the shares. The shares may trade at a discount or premium to their net asset value.

Investment trusts may borrow money in order to make further investments. This is known as gearing. The effect of gearing can enhance returns to shareholders in rising markets but will have the opposite effect on returns in falling markets.

The Fund's Ordinary shares (Ords) are geared by the Zero Dividend Preference shares (ZDPs) and rank for repayment of capital after the ZDPs and any creditors of the Fund. A positive net asset value for the Ords will be dependent upon the Fund's assets being sufficient to meet the prior capital entitlements of the holders of the ZDPs. The Ords should therefore be regarded as carrying above average risk. The ZDPs are not a protected or guaranteed investment. In particular, should the Fund be wound up prior to its planned winding up date, holders of ZDPs would only receive their accrued capital entitlement to the date of winding up - which would be less than the final anticipated capital entitlement of the ZDPs.
